

DECKING SCREW

INSTALLATION FOR THE FENCING, DECKING AGAINST WOODEN JOISTS

Decking Screws are made of carbon steel or stainless steel. They are specially designed to fasten wood or composite decking boards to wood or metal frames without mushrooming and blemishes that can occur on composite materials. They are specially coated to resist corrosion on a horizontal surface exposed to the weather and barricade the steel body contacting directly with the chemical treated lumbers.

Features

- Proprietary coated surface treatment in severe corrosive environments.
- Head with nibs makes the screws lay smoothly against the deck surface.
- Different colors of paints to match the decking boards.
- Can be collated when using screw gun, reduce the installation time.
- Easy to screw in and no pre-drilled holes needed.

Category: Decking Screw

Size: 4.2mm~5.5mm

Length: 30mm~120mm

Material: Carbon Steel/ Stainless Steel

Thread Type: Double Thread, Coarse Thread

Point Type: Cutting End Point (Type 17)

Plating: Long-Life Surface Treatment

Head Type: Flat, Trim, Cylinder
